

Claims

[1] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back side through the crotch to the abdomen side of the user; in that said second absorbent extends, when worn, from the back side to the crotch of the user; in that a leakage preventing sheet allowing no liquid permeation is interposed between said first absorbent and said second absorbent; in that said second absorbent leaves said first absorbent from said crotch to said back side thereby to form a pocket for holding the excrement between said first absorbent and said second absorbent; in that said leakage preventing sheet is arranged to contact in said pocket with said second absorbent; and in that said top sheet is so conformed to the shape of said pocket as to cover said leakage preventing sheet.

[2] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back through the crotch to the abdomen side of the user; in that said second absorbent extends, when worn, from the crotch to the abdomen of the user;

in that a leakage preventing sheet allowing no liquid permeation is interposed between said first absorbent and said second absorbent; in that said second absorbent leaves said first absorbent from said crotch to said abdomen side thereby to form a pocket for holding the excrement between said first absorbent and said second absorbent; in that said leakage preventing sheet is arranged to contact in said pocket with said second absorbent; and in that said top sheet is so conformed to the shape of said pocket as to cover said leakage preventing sheet.

[3] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back side through the crotch to the abdomen side of the user; in that said second absorbent includes a back side second absorbent extending, when worn, from the back side to the crotch of the user and an abdomen side second absorbent extending, when worn, from the crotch to the abdomen side of the user; in that a leakage preventing sheet allowing no liquid permeation is interposed individually between said first absorbent and said back side second absorbent and between said first absorbent and said abdomen side second absorbent; in that said back side second absorbent leaves said first absorbent from said crotch to said back side,

and said abdomen side second absorbent leaves said first absorbent from said crotch to said abdomen side, thereby to form pockets for holding the excrement individually between said first absorbent and said back side second absorbent and between said first absorbent and said abdomen side second absorbent; in that said leakage preventing sheet is arranged to contact in said pocket with said back side second absorbent or said abdomen side second absorbent; and in that said top sheet is so conformed to the shape of said pocket as to cover said leakage preventing sheet.

[4] A development type paper diaper as set forth in any of claims 1 to 3, characterized in that an excrement containing gathering is disposed along the opening upper end of said pocket and on said top sheet of said second absorbent.

[5] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent, a third absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back side through the crotch to the abdomen side of the user; in that said second absorbent and said third absorbent extend, when worn, from the back side to the crotch of the user; in that a leakage preventing sheet allowing no liquid permeation is interposed between said second absorbent and said third absorbent; in that said second absorbent leaves said first

absorbent from said crotch to said back side thereby to form a pocket for holding the excrement between said first absorbent and said second absorbent; and in that said top sheet is conformed to the shape of said pocket.

[6] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent, a third absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back side through the crotch to the abdomen side of the user; in that said second absorbent and said third absorbent extend, when worn, from the crotch to the abdomen side of the user; in that a leakage preventing sheet allowing no liquid permeation is interposed between said second absorbent and said third absorbent; in that said second absorbent leaves said first absorbent from said crotch to said abdomen side thereby to form a pocket for holding the excrement between said first absorbent and said second absorbent; and in that said top sheet is conformed to the shape of said pocket.

[7] A development type paper diaper adapted to be worn on a human body for absorbing and holding excrements, comprising a back sheet, a first absorbent, a second absorbent, a third absorbent and a top sheet in the recited order, characterized: in that said first absorbent extends, when worn, from the back side through the crotch to the abdomen side of the user; in

that said second absorbent includes a back side second absorbent extending, when worn, from the back side to the crotch of the user, and an abdomen side second absorbent extending, when worn, from the back side to the crotch of the user; in that said third absorbent includes a back side third absorbent extending, when worn, from the back side to the crotch of the user, and an abdomen side third absorbent extending, when worn, from the back side to the crotch of the user; in that a leakage preventing sheet allowing no liquid permeation is interposed between said back side second absorbent and said back side third absorbent and between said abdomen side second absorbent and said abdomen side third absorbent; in that said back side second absorbent leaves said first absorbent from said crotch to said back side, and said abdomen side second absorbent leaves said first absorbent from said crotch to said abdomen side, thereby to form pockets for holding the excrement individually between said first absorbent and said back side second absorbent and between said first absorbent and said abdomen side second absorbent; and in that said top sheet is conformed to the shape of said pocket.

[8] A development type paper diaper as set forth in any of claims 5 to 7, characterized in that an excrement containing gathering is disposed along the opening of said pocket and on said top sheet of said second absorbent or said third absorbent.

[9] A development type paper diaper as set forth in any of

claims 1 to 8, characterized in that a cubic leg gathering is disposed along said first absorbent.

[10] A development type paper diaper as set forth in any of claims 1 to 9, characterized in that said first absorbent has a less amount at the widthwise center than that on the two sides in the widthwise direction.
